

Environmental guiding principles

Gebr. Schwarz GmbH

The preservation of the environment for human and animals is of paramount importance for Gebr. Schwarz Ltd. The management and all employees are committed to environmental awareness in compliance with all binding obligations and legal requirements.

The involvement of all stakeholders is encouraged to check and continuously improve the environmental performance regarding the manufacture and use of our products.

The environmental effects of the significant impacts of our activities and products are observed, regularly evaluated and goal-oriented action plans as well as responses are scaled back within the limits.

The economical use of energy and materials is ensured by our employees competent action who utilize our modernly oriented production facilities, procedures and tools environmentally optimized.

We propose manufacturing engineering that is economical and environmentally compatible in a balanced ratio to customers at the outset of the project drawing.

Production waste out of the plastic manufacturing are varietal processed and led back based on customer specifications in the production process. Arising waste is collected, stored and disposed properly.

The risk of accidents with harmful effects on the environment are minimized by measures in regard to the organization, engineering and maintenance. Substances that can cause particularly dangerous consequences are avoided if possible.

Transport logistics is optimized in consultation with our customers and the shipping company by avoiding additional transports be avoided to the greatest possible extent.

Suppliers are integrated into our guidelines and trained when working on the premises by our staff.

The effectiveness of the environmental management system and the implementation of environmental objectives is checked through periodic audits which ensure continuous improvement of the environmental management system across-the-board.

We support with our investments in nature and environment the preservation of biodiversity and achieve synergies of ecology and economy.
